

What is stormwater? Where does it go?

The stormwater system carries rain from your home, garden or business through downpipes and storm drains, to the nearest lake, creek or river.

Clean stormwater helps keep our local waterbodies healthy.

Many materials carried within the stormwater system can pollute our local waterways because it is not treated like sewer water.

Protect our local waterways from stormwater pollution

What can YOU do to protect our local waterways?

Pollution entering the stormwater system threatens the livelihoods of our local waterbodies.

Our creeks and wetlands provide a habitat for birds, frogs, other animals and plant life that act as a natural filter for small amounts of pollution in the water.

Prevent soap from entering the drain by washing your car on the lawn, which absorbs the water.

Clean up after your dog by "scooping the poop" and placing it in the trash can.

Compost or place your garden clippings in the trash instead of sweeping it into the street or down the drain.

For Household Hazardous Waste, please contact Harris County at 346-286-4294 for information. The Harris County facility is located at 290 at Hahl Road
